*“If you can’t **measure** it you can’t **manage** it”*

Transparency/MRV

Climate Action

This is true for:

Managing your personal finance, building a bridge,
managing a business or **taking “Climate
Action”**

Avoid the pitfalls..

- Headless Chicken
- Rudderless boat
- Titanic
- Shifting sands

“Capacity Building” approaches..

- We do it for you..... 
 - Headless chicken
- Random training... 
 - Rudderless boat
- Do without it.. 
 - Titanic
- National System Driven.. 
 - Strong foundation
 - Empowerment & Direction
 - Accelerate Action

- shifting sands

Accelerate effective Climate Action

= Better decision making & engagement = Accelerated ACTION

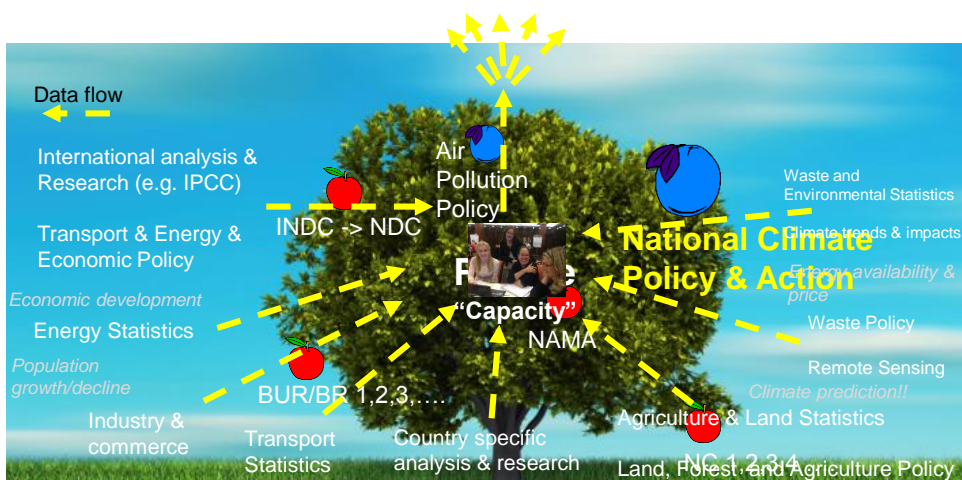

- To Achieve 1.5°
- To minimising impacts if/when we don't
- Sustainable **Centres of Excellence** to support countries in meeting their commitments
- Strong **motivated sustainable (long term) teams & experts**
- Established, **valued and sustainable Data Supply** (data flows)
- **High quality outputs**: MMR, ESD, NDC, BUR, NC, GHG inventory, PAMs, Projections etc (adaptation strategies, EUETS systems???)...
- **Better linked** between related activities (Inventories, Actions, Projections, Adaptation, Trading systems, Other environmental (e.g. Air Quality control), Co-benefits/Impacts for economy, society, environment etc)
- **Confidence to participate e.g.** in international consultation and analysis (review), trading systems.

Build a strong foundation “National Systems”

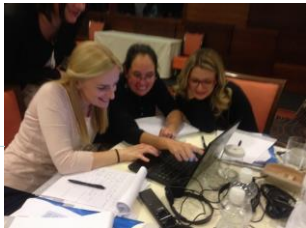

National Systems

National Systems

National Systems = People

Strong foundations = People

- **Strong leadership** (from above or below)
- Experts with the right **background & skills**
- Experts **that want to stay** in the system
 - by reward them with training, tools, Job security, succession & prospects
- Experts that **build relationships and networks**
 - for efficient "data flow" (e.g. data suppliers and other expert)
 - For continuous improvement
- Encourage people to be passionate about **Engaging** wider stakeholders
 - Promoting their data and messages
 - Helping them to link to co-benefits
- Experts that can to provide **Compelling sustained Evidence**
 - to national decision makers and build momentum for **Climate Action**

Invest **wisely and modestly** in **People their Knowledge and tools** so they can help their countries to invest **big and smart** in **Successful Climate Action**....

....And, of course make sure they can produce respectable NDC, BUR, NC reports etc..

Efficient Transparency Frameworks

- A **common clear approach** for Transparency (Mitigation, Adaptation, Support)
 - Mitigation trends & action (Emissions/Removals) (WG1,2 & 3)
 - Adaptation: climate monitoring, risks, impacts, action (WG4)
 - Support and technology transfer (??)

- WG1: Climate Policy Development & Building Climate Awareness
 - Mitigation: Policies & Measures, Projections
- WG2: Monitoring Mechanism Regulation?
 - GHG Inventories & reporting under MMR
- WG3: ETS
 - Mitigation: Trading/Price systems.. Establishing important Policies & Measures
- WG4: Adaptation
 - Adaptation plans development
