

Kosovo

Republic of Kosovo has Energy Strategy for 2009-2018 (in drafting) , Action Plan for Renewable Energy Sources for 2013-2020, Strategy for Climate Change and other strategic documents.

Priority:

- Building of new capacity based on using of lignite and renewable energy sources

- Building of new capacity based on:

- Solar energy (including PV installation)
- Wind energy (Kosovo has some studies)

- Hydro (to increase hydro installation)

- Biomass (installations with small capacity)

Measures for efficiency:

- Old existing building (thermal isolation, solar panel, etc)
- To continue with cogeneration system for district heating in all country (existing: district heating in part of Prishtina)
- To continue with public lighting (existing: Shtime, Fush Kosova, etc.)
- Transport (public transport – CNG buses)
- Distribution (improving of old existing system - reduction of technical losses)

With this measure we will ensure stability of supply energy and to protect environment (reduction of emissions and increase energy efficiency)
