

Exercise 3

Exercise 3

- In the previous two exercises we asked to prepare
 - Elements of ETS structure for your country
 - Define tasks required to implement selected element on the shorter term and associated barriers/challenges
 - Almost all of you mentioned MRV as an important short term element to be elaborated
 - Some of you see other elements as more important element

Exercise 3

- In this exercise we ask you to
 - Prepare the heart of a project proposal/fiche for setting up the work on selected element (MRAV)
 - Define wider objective, immediate objective, results and activities required
 - Logframe elements

Intervention logic/Negative

→ **THEN** Effect/Impact of problem of problem:
People are thirsty and health impact

— **IF** Main problem:
→ No drinking water

— **IF** Cause of problem:
• No wells
• No potable water

Intervention logic/Positive

→ **THEN** Wider objective :
Thirst satisfied, people healthy

→ **IF** Immediate objective :
drinking water available

→ **IF** result :

- Wells available
- Potable water storage

MRAV/Negative

→ **THEN** Effect/Impact of problem of problem:
Country not ready at establishing with the ETS at the date of accession

— **IF** Main problem:

→ No capacity to allow recurring monitoring, reporting and verification on GHGs emissions

— **IF** Cause of problem:

- No legal framework conditions established
- No institutional framework conditions established

MRAV/positive

→ **THEN** Wider objective :

Country ready at establishing the ETS system at the date of accession

— **IF** Immediate objective :

→ **THEN** Capacity to allow recurring monitoring, reporting and verification on GHGs emissions in the next 3 years

— **IF** Results :

- legal framework conditions established
- institutional framework conditions established

MRAV

→ **THEN** Wider Objective To ensure compliance with the ETS on the long term by establishing a fully functioning national system (5 – 10 years)

→ **IF**

→ **THEN** Immediate Objective: MRAV system as an essential building block in place to allow recurring monitoring, reporting and verification on GHGs emissions (3 years)

→ **IF**

→ **THEN** Result: legal, institutional framework conditions established and **associated outputs/indicators of achievement: This exercise**

→ **IF**

Activities over the next year: **This exercise**

Exercise 3

Question 1:

- Revisit already defined objectives, results. Are you still happy with them? Redefine?

Question 2:

- We receive a modest budget for the next 2 years to deliver results
- Which outputs I will have when I achieve results
- Which activities I will need to implement implement (possibly **in sequential order**) to achieve identified outputs

Exercise 3

Example:

- Step 1: Legal and institutional analysis
- Step 2: Define options for an institutional system
- Step 3: Select most appropriate option
- Step 4: Legal work
- Step 5: Training / MoUs etc.

Exercise 3

If you achieve to define objectives and associated results, outputs and activities

then

You have done the most important part of the work for a fiche
